Photoshop Elements (PE) is also commonly used by beginners. It is a free image-editing program that has many of the same features as Photoshop; the difference is that you must purchase the software separately. (See the section 'Photoshop Elements' later in this chapter for more info.) Photoshop's creativity An image can be turned into many different things, such as an illustration, a screen saver, a Web page background, a logo, or any other type of graphic design. Photoshop can create and alter images by using any of the following approaches: Blending: An image can be overlaid with different layers that include other images, colors, and effects. Gradients: Used to create repeated colours or shades in an image. Painting: Used for special effects, such as making a picture look like it was painted by a child. Paths: Specific paths or outlines of an object can be used to outline an image. Patterns: Patterns can be painted over the image. 3D: Used to create images that appear to be three-dimensional. Transparency: An image can be made to appear transparent or opaque. Virtual painting: The image can be painted onto a canvas, which can then be manipulated as a painting. Photoshop is a powerful tool that enables you to experiment with different techniques and make creative images. After you familiarise yourself with Photoshop and understand its capabilities, you will want to be able to explore as many creative options as possible. Photoshop isn't all that. It requires a lot of practice to get it right, so put in the time to learn Photoshop. A mistake now can be costly in future projects. Exploring Photoshop's toolbars The main features of Photoshop reside in the editing panels: Background: The Background panel enables you to make decisions about a digital image from the very beginning. If you create a new document, you have a window that displays the Background panel and an empty canvas. You use the Background panel to set the size, resolution, and background colour of the new document. Layers: The Layers panel allows you to create different images that you then place on the original photo. You can lay one image on top of another, combine parts of multiple images on the same layer, adjust layer settings (such as blend mode and opacity), add layers, and make groups of layers. The Layers panel also

[A new type of mutation spectrum in Syrian hamster mutants designated to live in c-u irradiated environment]. Five new mutant strains of Syrian hamster were characterized by spectrofluorometry. All these mutants were found to live in complex environment which contains silicate. Single strain of this kind, designated as "Obelix" was used for further investigation of mutation spectra and the time of the appearance of the mutants. The mutations were found to have the same monofactorial character. The mutant spectrum consisted of 45 mutations, among them there are seven types of chromosomal mutations: chromosomal aberrations, micronuclei, heterochromatin, aneuploidy, polyploidy, cytological changes of stem cells and stem lines development and pleiotropic mutations. The total mutability level of all mutants is 1.5-3.7%. The age of appearance of the mutants of "Obelix" strain ranges from 45 to 60 months. Only one mutation, the number of heteromorphism has the increased rate from 2 to 2.6%. Taking into account mutation data obtained in mutant strains of "Obelix" strain and literature data on the mutant spectrum of laboratory strains of Syrian hamster, it is possible to formulate the hypothesis on the fact that the radiation-induced mutation spectrum is completely changed in mutants irradiated in living environment, and the similarity of the mutation spectra in laboratory mice with that in mutants irradiated in vitro and in vivo makes them less suitable for evaluating their mutagenic risk in man, than are the mutant strains of Syrian hamster kept in vitro conditions. Zwolle Wim Zwolle was appointed executive chairman at PSV Eindhoven on 21 July 2007. He succeeded Bert van Marwijk, but he would step down as chairman of the board to be replaced by Rolf Eigelman and Achmed Elkassam who took up the chairmanship and presidency. He came to PSV after a successful spell with Ajax, where he held various positions within the club and was assistant coach to Louis van Gaal. He became head coach in September 2003. He took over from Guus Hiddink, who had replaced De Boer. He signed a two-year contract. Ajax were recently knocked out of the UEFA Champions League in the quarter final, meaning Zwolle has never beaten Bayern Munich in European competition. Zwolle achieved promotion to the Eredivis

For the fastest way to automate posting to Facebook, I highly recommend the free Automator app for Mac (or Windows as a free Chrome app). It really is that simple. Once you've logged into your Facebook account, press the Preference key on your keyboard and select the Create New Action. To make it as foolproof as possible, there are a number of AutoBuild rules that can be created. Personally, I created a rule that pulls in all of the fields from the Facebook entry I want to post, and it's configured to include the various data fields and "tags" from the URL. Once you've chosen which of your entries you want to automate, just hit the Add button and you're done. Now you can have your Facebook page auto-post on a regular basis using only a few clicks (or mouse clicks) of the mouse. Facebook's new timeline is a worthwhile upgrade from the previous version. Still, it has a few bugs, and those bugs will almost certainly be fixed by the time the timeline is fully released to all of us non-techie types. In the meantime, here are a few tips that will help you out. Facebook has added new "pages" to its family tree of social networks. You can go to www.facebook.com and select them to add the page to your profile. If you're serious about growing your social network, you'll have to promote your pages (the link you share, and the ones you find) through other social networks. So how can you tell whether someone is an actual friend on Facebook? The easiest way is to look at his/her profile and determine whether they have a profile picture (most people do) and whether they are or are not friends with you. If they are your friend, your profiles look similar. You can also click on the Top Left corner of their profile, select Photo from the dropdown, and then click on their profile picture. If you have an "eye" on their profile (for example, a friend sent you the link to their profile), then their profile picture should be highlighted. When you're on a page, the URL from the browser will be displayed in the URL box on the toolbar. If you click on the URL, you'll be taken back to that profile. The format of a Facebook URL is rather complicated. The URL will look like this:
